REASONS FOR ALLOWANCE

1. The following is an examiner's statement of reasons for allowance: Application serial no. 10/761,535 is being allowed since none of the prior art of record teaches or fairly suggests a method and apparatus for analyzing blood comprising delivering a blood sample including cells to a test chamber to directly expose the blood sample to both a sensor and an electrode arrangement within the test chamber, applying a spatially varying electric field via the electrode arrangement to the blood sample within the test chamber to provide a portion of the sample with a depleted cell concentration by electrically redistributing cells within the blood sample away from the sensor, and sensing via the sensor a property of the portion of the blood sample. In addition, none of the prior art of record teaches or fairly suggests a blood analyzer comprising a fluid flow path including both a conduit portion and a test chamber configured to receive a blood sample, an electrode arrangement located in the conduit portion and configured to generate a spatially varying electric field to reduce a cell concentration in a portion of the blood sample before the blood sample reaches the test chamber, and a sensor located in the test chamber and configured to measure a property of the portion of the blood sample whose cell concentration was reduced in the conduit portion. None of the prior art of record teaches or fairly suggests removing blood cells from a blood sample by applying a spatially varying electric field to the sample located within a test device before being measured by a sensor in the test device for an analyte concentration such as glucose.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue
